3 Introduction

The objective of this document is to summarize the technical design of the HR and Management Dashboard project developed for MBC.

This project uses the Oracle BI Applications (OBIA) technology as the backbone of the development. This technology provides a set of prebuilt elements that cover the end-to-end of the BI system, this the ETL, the DWH and the OBIEE dashboards.

Therefore, the document is focused on describing the customizations applied to OBIA. The customizations can be applied by modifying the out-of-the-box (OOTB) elements or by adding new custom objects added on top of them.

In the following points, we cover all the applied customizations, focusing on the ETL/DWH design and on the RPD/Front-End design.

4 ETL and DWH Design

This section describes the main components of the ETL process, focusing on the customisations applied to the Oracle BI Applications (OBIA) framework Out-of-the-box (OOTB) components.

The following components are analysed:

- Custom source and lookup views
- Custom source tables
- Customised OOTB tables (new columns added)
- Custom tables created

Custom Source and Lookup Views

Custom views created in EBS as sources or lookups for the project.

5 Custom Patches in ODI

Custom patches are created to solve known issues of OBI Apps. Custom patches located in **Bi Apps Project** → **Mappings** → **CUSTOM_PATCHES**.

Each patch executes a procedure to delete duplicates in the corresponding table. All the patches have to be included in the Load Plan after it has been generated by OBI Apps.

5.1 Patch for W_EMPLOYEE_DS

- Objective: Avoid errors when creating indexes due to duplicate entries
- Scenario name: CUSTOM_PATCHES_PATCH_W_EMPLOYEE_DS
- To be placed in:

Start Load Plan → Global Variable Refresh → Source Extract Phase → 1 SDE Extract → 2 SDE Dimension Group → Parallel → 3 SDE Dims EMPLOYEE_DIM

Place between **“Load Target Table”** and **“Finalize EMPLOYEE_DIM”**

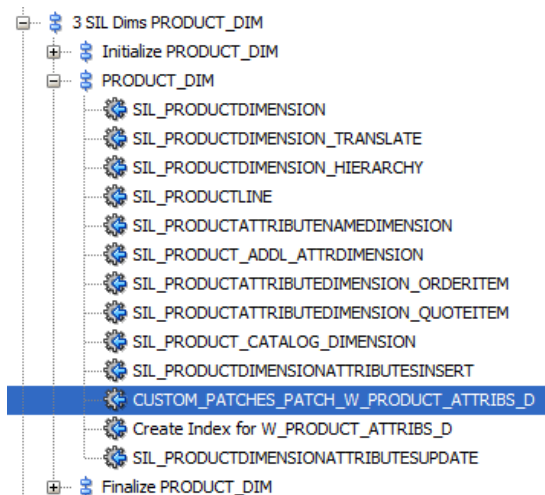

5.2 Patch for W_PRODUCT_ATTRIBS_D

- Objective: Avoid errors when creating indexes due to duplicate entries
- Scenario name: CUSTOM_PATCHES_PATCH_W_PRODUCT_ATTRIBS_D
- To be placed in:

Start Load Plan → Global Variable Refresh → Warehouse Load → 1 SIL Load → 2 SIL Dimension Group → Parallel – Others → 3 SIL Dims PRODUCT_DIM → PRODUCT_DIM

Place between “**SIL_PRODUCTDIMENSIONATTRIBUTESINSERT**” and “**Create Index for W_PRODUCT_ATTRIBS_D**”

5.3 Patch for W_PRODUCT_D

- Objective: Avoid errors when creating indexes due to duplicate entries
- Scenario name: CUSTOM_PATCHES_PATCH_W_PRODUCT_D
- To be placed in:

Start Load Plan → Global Variable Refresh → Warehouse Load → 1 SIL Load → 2 SIL Dimension Group → Parallel – Others → 3 SIL Dims PRODUCT_DIM

Place between “**PRODUCT_DIM**” and “**Finalize PRODUCT_DIM**”

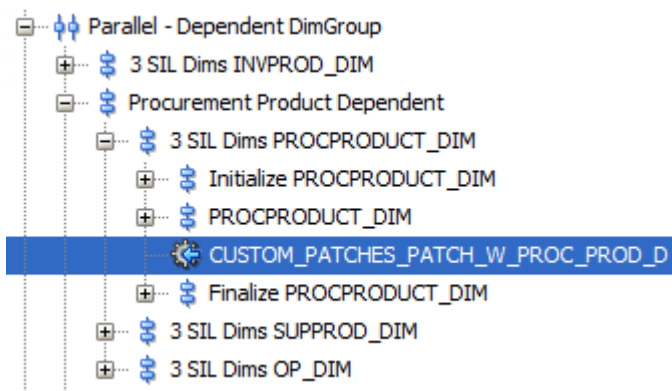

5.4 Patch for W_PROC_PROD_D

- Objective: Avoid errors when creating indexes due to duplicate entries
- Scenario name: CUSTOM_PATCHES_PATCH_W_PROC_PROD_D
- To be placed in:
-

Start Load Plan → Global Variable Refresh → Warehouse Load → 1 SIL Load → 2 SIL Dimension Group → Parallel – Dependent DimGroup → Procurement Product Dependent → 3 SIL Dims PROCPRODUCT_DIM

Place between “**PROCPRODUCT_DIM**” and “**Finalize PROCPRODUCT_DIM**”

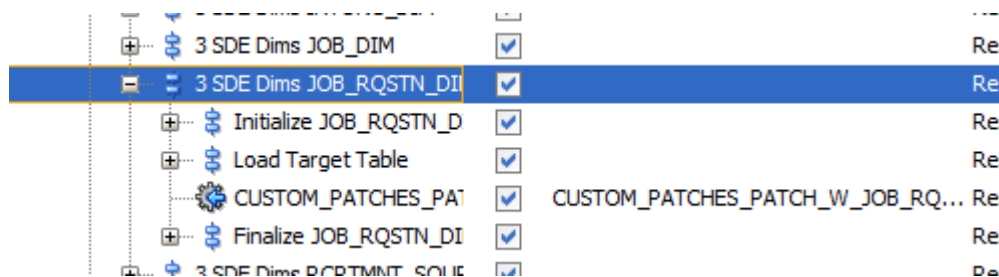

5.5 Patch for W_JOB_RQSTN_DS

- Objective: Avoid errors when there are multiple vacancies opening with single vacancy code
- Scenario name: CUSTOM_PATCHES_PATCH_W_JOB_RQSTN_DS
- To be placed in:

Start Load Plan → Global Variable Refresh → Source Extract Phase → 3 SDE Dims JOB_RQSTN_DIM

Place between **“Load Target Table”** and **“Finalize JOB_RQSTN_DIM”**

6 RPD Design

This section describes the main components of the OBIEE Repository RPD, focusing on the customisation applied to the Oracle BI Applications (OBIA) framework Out-of-the-box (OOTB) components.

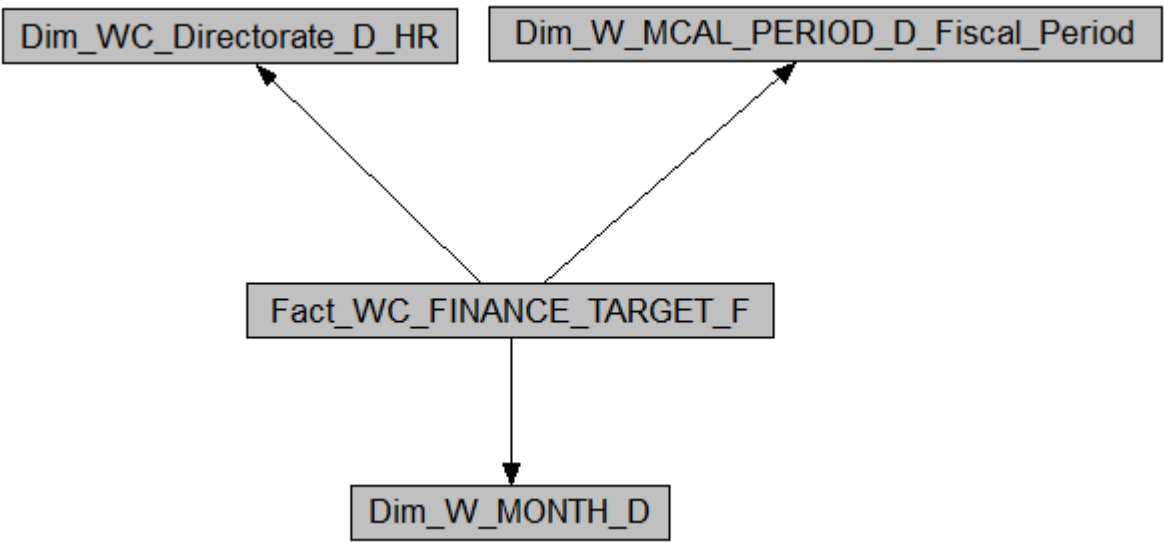

The following areas are covered:

- Physical model and joins
- Business model and dimension hierarchies
- Definition of metrics, aggregations and time calculations

6.1 Physical Model

In this section we describe the physical model of the RPD. Here we will only show the star diagrams and the joins between facts, dimensions and lookups that have been customised or created for this project.

6.2 Business Model

In this section we describe the business model of the RPD. We will present the dimension hierarchies and the logical star diagram, as well as the calculation of the main metrics.

6.2.1 Dimension Hierarchies

In order to allow proper drill downs and aggregations, different hierarchies have been created for some of the custom dimensions created in the project. Here we present the logical hierarchies of the Business Model of the RPD.

6.2.1.1 MBC Organization Hierarchy
